BRAKE FLUID BLEEDER

HI-BLEEDER TYPE-S

Brake fluid replacement and air bleeding can be completed easily by one person!

 Hiroshima, Fukuoka / China, Thailand

Compatible with various advanced brake systems! We support the efficiency of your services from Small to LC Vehicles!

1.5 times more powerful than before!

The latest brake systems have narrow piping and complicated hydraulic systems, resulting in high piping resistance. This Bleeder has a pressure pump that is 1.5 times more powerful than the previous model. This allows for smoother brake fluid changes. Bleeding the booster clutch of large trucks and other vehicles can now be done more smoothly.

Achieves the latest technology and energy savings!

Brake fluid replacement is one of the more tedious maintenance tasks, and modern cars require advanced techniques. Hi-Breeder solves this tedious task in one go.

Anyone can do uniform work!

There is no need to operate the brakes after lifting the vehicle. The dehumidifier ensures perfect brake fluid management. The brake fluid is pressurized with an electric pump, so after setup you can change the fluid and bleed air by simply loosening the bleeder plug on the wheel.

Easy to operate, universal adapters and dedicated adapters for each vehicle model!

It's easy to operate; just connect the power supply and press the switch. In addition to a universal adapter, there are also vehicle-specific adapters available, making installation in your vehicle easy.

Also OK for vehicles equipped with ABS and ECB!

The brake systems of hybrid vehicles are different from conventional gasoline vehicles in that the hydraulic pressure from the brake master cylinder is not necessarily applied to all wheels, and in some vehicles the hydraulic pressure is applied directly from an electric hydraulic pump. Even in such vehicles, fluid replacement can be easily performed by continuously pumping the fluid with this bleeder.

Smooth movement is possible!

The easy-to-hold handle and large diameter wheels allow for smooth, stress-free movement.

A slim and compact stainless steel body with top and bottom integrated. The hose is made of a new material with improved brake fluid resistance.

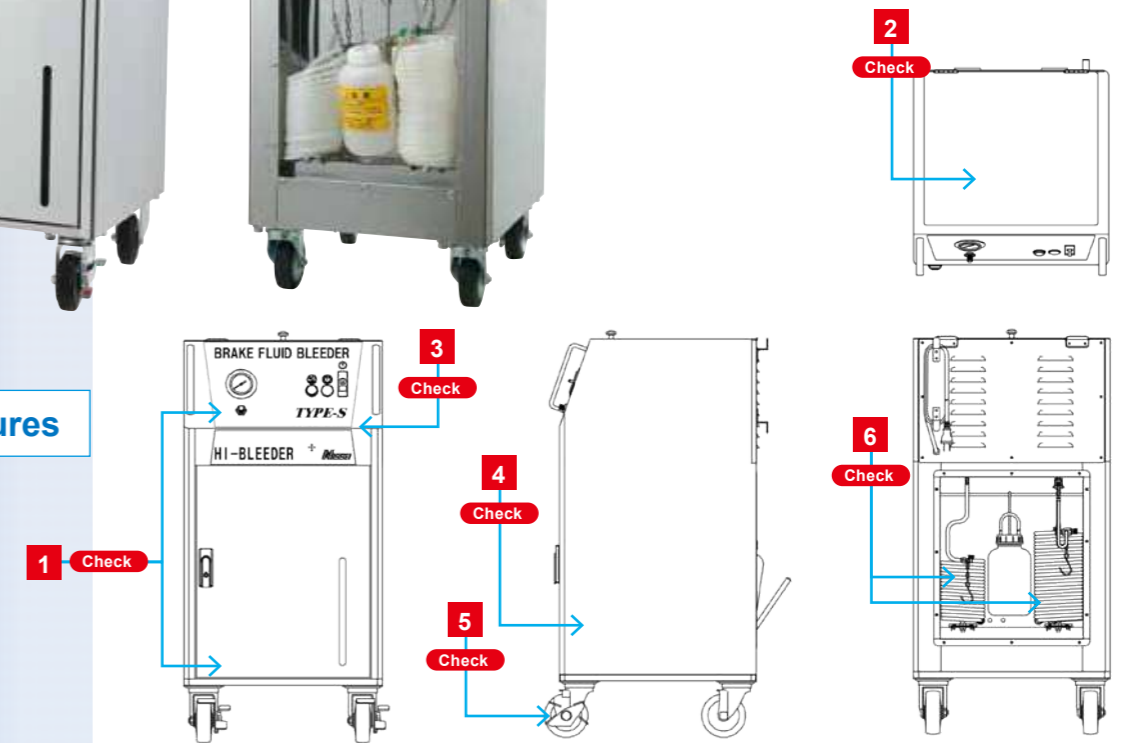

BB-1000RNS / BB-910RNS / BB-920RNS

BB-1000CNS

Main features

<p>1</p> <p>A lamp and buzzer will inform you when new liquid is lack. You can work more safely.</p>	<p>2</p> <p>The adapter is conveniently stored at the top.</p>	<p>3</p> <p>Circuit breaker eliminates the need to replace fuses. Designed handle makes it easy to hold and move.</p>
<p>4</p> <p>It houses a large-capacity waste liquid tank, and the amount of waste liquid can be visually checked from the main unit.</p>	<p>5</p> <p>Large wheels allow for smooth movement.</p>	<p>6</p> <p>A hinged hose hanger is used to store the hose.</p>

Item No.	Compatible models	Power	Trochoid pump	Tank Capacity	Attachment Adapter	Dimention (W x D x H)mm	Weight
BB-1000RNS	Passenger to Large CV	AC100V, 100W with transformer	Pressure feed --- 1 pc Suction & pressure release --- 1 pc	18L	for all model	450×490×920	51kg
BB-910RNS	Small to 2t CV				for passenger		
BB-920RNS	2t CV to Large CV				for CV		
BB-1000CNS	All model	AC100V, 100W with transformer	Pressure feed --- 1 pc Suction --- 1 pc Pressure release --- 1 pc	18L~135L	for new car lines	450×490×1100 (Standard)	53kg
BB-2000RNS	Small to 2t CV	AC100V, 100W or 200W with transformer	Pressure feed --- 2 pcs Suction & Pressure release --- 1 pc	5L x 2	for two-liquid compatible passenger	450×490×920	54kg
